I. BELIEFS IN THE SPIRITS OF THE DEAD

The fear of the spirits of the dead and the desire of the living to propitiate them are the bases for the complicated burial rituals, not only of the Tiwi, but of all Australian tribes.

The Tiwi spirits of the dead, the *mopaditis*, live in self-contained communities at the various totemic places on Melville and Bathurst Islands. The *mopaditis* have the same appearance as the aboriginal folk, except that their bodies no longer have substance, being but nebulous images of their former selves.

No living person has seen these *mopaditis*, for they are invisible by day, white in the moonlight and black in the darkness. Although, normally, the *mopaditis* travel on the surface of the ground in the same manner as the aborigines, they are able, when crossing a river, or an arm of the sea, to walk on the surface of the water.

In the spirit land, the *mopaditis*, who are eternal, retain their totems (*pukwi*), marry spirit women of the correct tribal relationships, and have children who grow to maturity.[47] They eat the same food as the aborigines, going hungry if the hunting is poor,[48] and use the same implements and weapons.[49]

At the death of an aboriginal, the *mopaditi* rises out of the chest of the corpse. If the corpse is that of an infant, or a very small child, its *mopaditi* stays in the immediate neighbourhood, sleeping with the bereaved mother every night, but leaving in the morning before she wakes up. This continues until the woman has recovered from her grief.

After some months, the spirit child, now called a *buda-buda*, re-enters the body of its previous mother through her vulva and starts life again as a human being.

On the other hand, if the person has lived for some time, its *mopaditi* stays around the grave, mourning because it has to leave its old companions. But after three days have elapsed, the *mopaditi* calls out "*Nimbungi*" (good-bye), and sets off, unaccompanied,[50] to the locality where it was born, which, before

[47] The aborigines are not certain whether the children, like their parents, have eternal life.

[48] This is unusual; in most of the aboriginal heavens I have heard of, for example, north-eastern Arnhem Land (Mountford, 1956, p. 323), there is ample, easily-gathered food.

[49] These days, the *mopaditis* have even the modern wooden canoes, although, up to fifty years ago, their canoes, like those of the living people, were made from a folded sheet of bark.

[50] Some aborigines believe that the father, or some close relative, comes to the grave and guides the spirit to its birthplace.

761 [825] [761] wallaby, so that he could see the grave of his victim without being recognised.

On one occasion, when I was travelling with *Pulanimbuwi*, just after the death of his wife, he went to her grave, carefully searched the ground for tracks, then lifting up the sheets of paper-bark, examined the mound. Later, *Pulanimbuwi* announced that a *Marauji* (p. 154) had killed his wife, *Nulatini*, by getting inside of her body. But, although still there when she was buried, the *Marauji* had escaped through the hole *Pulanimbuwi* had seen in the mound.[64]

(2) *The Seclusion of the Grave*

769 The grave of *Waniamperi* was about a hundred yards from the road between our camp and the Snake Bay aboriginal settlement. Although aborigines, who were only distantly related to the dead man, walked backward and forward along this road, all the *pukamuni* people had to take a roundabout path from which it was not possible to see the grave site.

One night, *Marawani*, one of the chief mourners, had to pass along the road to our camp. When he was approaching the position from which the grave site could be seen in the day-time, his wife, wrapping his head in a blanket, led him past the spot. This practice was only allowed at night; it was prohibited during the day.[65]

[775] [784] No aboriginal man hunted the creatures, or woman gathered the plant foods adjacent to the grave, so that, should the *mopaditi* of *Waniamperi* return to his burial place for a while he would find ample food.

4. THE PRELIMINARY CEREMONIES, THE ILANIAS

(1) *The Ilanias of Waniamperi*

765 About two months after the burial of *Waniamperi*, *Wurarbui*, the ceremonial leader of the Melville Island people, sent message sticks to Bathurst Island aborigines telling them that the *ilanias* (preliminary rituals) of *Waniamperi* were about to start.

[123] We saw eleven of *Waniamperi's ilanias*. But, as they were more or less the same, I will describe only three.

[765] [64] *Pulanimbuwi's* action was viewed with considerable disfavour. He, as a near relative, should not have gone near the grave until the final rituals. Only the *wanares* (workers) who cut the poles are allowed to do that.

[183] [65] Under the normal tribal conditions, these precautions would have been unnecessary, because the place of burial would then have been in some distant, unfrequented locality.

elaborately shaped nor decorated, often being covered with no more than a series of dots.[1]

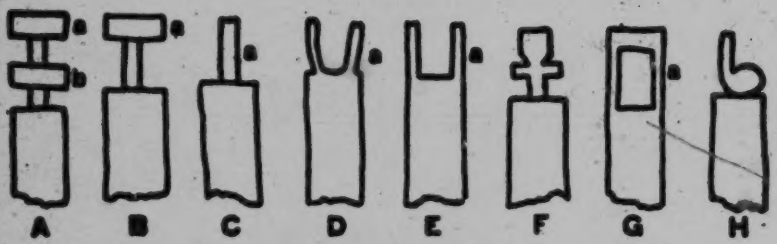

FIG. 8. *The Burial Poles*

Origin of the Pukamuni Poles

At present we have no evidence to show whether the custom of erecting burial poles around the grave in such numbers, not as a memorial, but as a gift to the dead, is confined entirely to the Tiwi tribe, or whether it is used in any other part of the world, and has reached the Tiwi by diffusion. There certainly are no similar burial poles on the Australian continent.

In north-eastern Arnhem Land, some of the decorated log coffins are as high as seven feet.[2] But the function of those coffins bears no relationship to that of the burial poles of Melville Island, the former being no more than coffins to hold the bones, and the latter, gifts to please the spirit of the dead.

It is possible that, during the long period of isolation from the mainland cultures, the Melville Islanders may have changed coffins of north-eastern Arnhem Land into the burial poles of the Tiwi.

The only examples of burial posts outside of Australia known to me, that are in any way comparable in function to those on Melville Island, are the *malanggan* burial ornaments of New Ireland described by Kramer.[3]

Methods of Manufacture

Although, at the conclusion of the *pukamuni* rituals, the grave is totally neglected and the poles allowed to decay, the "workers", using steel axes[4]

[1] Although *Tjamalampua* is not fully correct (see Bremer's and Campbell's statement in the early nineteenth century, pp. 107, 108), it indicates that both the poles and their painted decorations have, with the passing of the years, and the acquisition of steel tools, become more complex.

[2] Mountford, 1956, p. 317. [3] Kramer, 1925.

[4] The evidence of Bremer, Spencer and the aborigines, suggests that before the advent of metal the only cutting tools owned by the aborigines would have been crude stone axes, and the shells of cockles. It is likely that, under these conditions, the poles would
